

## Who wrote the letter to Hebrews?

--Data mining for detection of text authorship

#### **Honours Project Proposal Seminar**

**Date:** 12/August/2011

**Presented by:** Kai He, Yan Xie, Zhaokun Wang

> Supervisor: Derek Abbott

**Co-Supervisor:** Brian Ng

#### **Background information for Data Mining**

#### What is Data Mining?

The process of analyzing data from different perspectives and summarizing it into useful information.

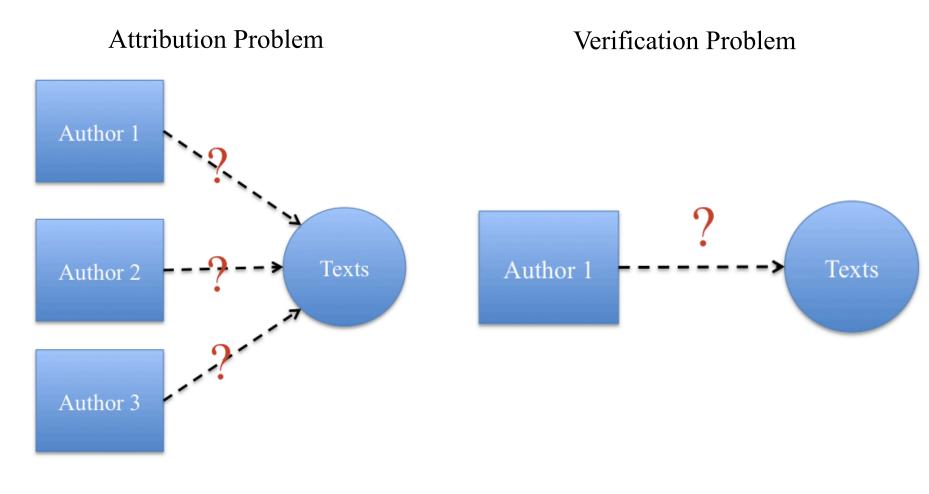

#### **Applications:**

- Plagiarism analysis
- Authorship identification
- Near-duplicate detection

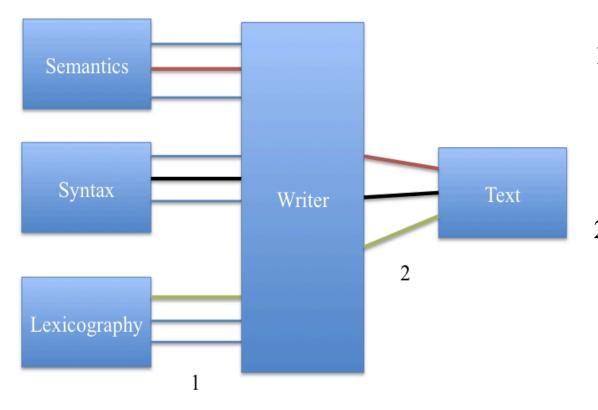

#### Two types of Authorship Identification problems

#### The Basis for Authorship Attribution

- 1. Writers are offered significant amount of choices on how to write a text.
- 2. Each specific text carries the fingerprint (Style marker) of its creator.

preferred choices.

• These choices are present and could be detected in all texts written by that creator.

#### The Assumptions

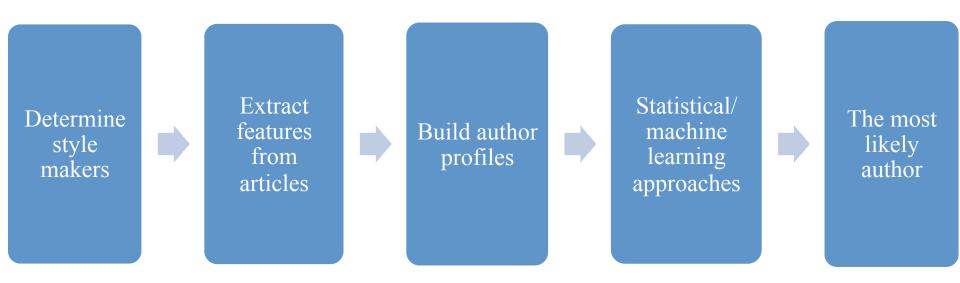

- A specific single author.
- The author made the choices.

#### General Approach for Authorship Attribution

#### **Background information for this project**

The Letter to the Hebrews (or The Epistle to the Hebrews) is one of the books in the New Testament. Its real author is unknown.

Scholars have sought to identify the author of Hebrews since the time of Origen (185 - 256 AD.)

There are 6 candiates that could be the author of Hebrews.

IGNATIUS Catholic Study Bible

> The Letter to the Hebrews

Commentary, Notes, & Study Questions

Revised Standard Version Second Catholic Edition

#### **Motivation for this project**

Social:

- Result from this project might contribute to the study of New Testment.
- Can be used in Forensic investigations as well as cirminal investigations.

Ethical:

 Used in Plagiarism analysis to prevent someone stealing the credit of other people's work. School of

## Electrical & Electronic Engineering

Project Objectives

- Implement two different algorithms in authorship attribution based on character level and word level.
- Compare performance of the two approaches.
- Apply our methods to identify the author of the letter to Hebrews.

## Past Research

- 1887 Mendenhall uses characteristic curve of composition
- 1983 Smith uses stylometrics measurement
- . . .
- 2004 Sabordo uses data compression technique
- 2005 Talis uses Trigram Markov model with Multiple Discriminant Analysis(MDA)
- 2010 Jie et al. use three algorithms: Function Word Frequency, Word Recurrence Interval and Trigram Markov Model

## **Authorship Attribution**

Base	Features		Required tools and resources
	Lexical	Token-based Vocabulary richness	word length, sentence length, letter, digits
	Character	character types character n-grams	character, letter, digits
	Syntactic	Part-of-speech(POS) Chunks Sentence and phrase structure	text chunker, sentence splitter, tokenizer
Advance	Semantic	Synonyms Semantic dependencies	text chunker, sentence splitter, tokenizer

## **Proposal Algorithms**

- Two proposed algorithms:
- Common N-gram (CNG)
- Maximal Frequency Word Sequences

## **Common N-gram (CNG)**

- Features:
  - Character level
  - Convert character n-grams into byte level

	"Adelaide"
Unigrams	A, d, e, l, a, I, d, e
Bi-grams	Ad, de, el, la, ai, id, de
Tri-grams	Ade, del, ela, lai, aid, ide

character n-grams

- Why CNG?
  - Language independent
  - Relatively higher accuracy (Keselj et al. 2004)

82 B1 82 F1 82 C9 82 BF 82 CD 82 B1 82 F1 82 C9 82 BF 82 CD 82 B1 82 F1 82 C9 82 BF 82 CD 82 B1 82 F1 82 C9 82 BF 82 CD 82 B1 82 F1 82 C9 82 BF 82 CD 82 B1 82 F1 82 C9 82 BF 82 CD 82 B1 82 F1 82 C9 82 BF 82 CD 82 B1 82 F1 82 C9 82 BF 82 CD 82 B1 82 F1 82 C9 82 BF 82 CD

### Maximal Frequency Word Sequences (MMFWS)

#### • Features:

- Word level
- Similar to the word N-gram based approach
- A special kind of word sequence

hu	r t	f	u l	t	a	n	k s
hea	r t	f	e l	t	tha	n	k s
h e	r	f	e l	t	h a	n	kies
h e	art	f	u l	ly	ba	n	k s

#### • Why MMFWS?

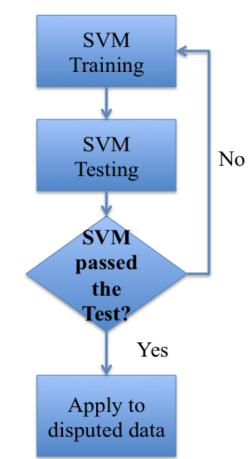

-Without using any sophisticated linguistic analysis of texts

- Not very sensitive to the size of documents

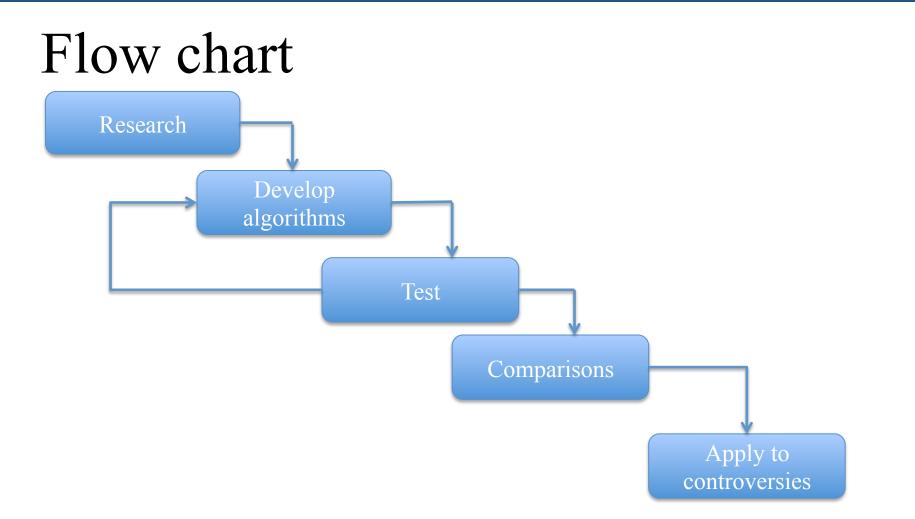

#### **Support Vector Machine (SVM)**

- What is Support Vector Machine:
  A type of machine learning that classify data
- The aim of SVM:
  - To find the decision boundary (hyperplane) that maximises the margin to the data points
- Why Support Vector Machine:
  - Success rate of prediction of the model
  - Easy to implement

## **Project Plan**

<b>Important Date</b>	Due Date
Proposal Seminar	12 <sup>th</sup> Aug 2011
Stage 1 Report Due	26 <sup>th</sup> Aug 2011
Stage 2 Report Due	28 <sup>th</sup> Oct 2011
Exhibition Information Due	9 <sup>th</sup> Mar 2012
Seminar Day	20 <sup>th</sup> Apr 2012
Exhibition Briefing	4 <sup>th</sup> May 2012
Final Report Due	25 <sup>th</sup> May 2012
Poster Due	29 <sup>th</sup> May 2012
Project Exhibition	1 <sup>st</sup> Jun 2012

## **Monitoring Mechanism**

- Meeting
  - Meeting with supervisors once a week
  - Meeting with group members twice a week
- Monitoring
  - Create the "checklist" in group
  - Example :

Task	student	Expected due date	Actual due date

## Group Member Roles

	Kai He	Yan Xie	Zhaokun Wang
Programmer	$\checkmark$	$\checkmark$	~
Secretary		$\checkmark$	
Document Manager	~		
Group Leader			~

## Risk Assessments

Risk	Priority	Probability Rating	Impact Rating	Preventive Measures
Wrong Software Function	90 (High Risk)	10	9	Proper design before writing the code
Behind Schedule	45	5	9	Regularity monitor the project schedule
Inefficient Resources	36	6	6	Find more information
Unfamiliar with Programming Language	30	5	6	Understand the basic programming language
Absence of Team Members	24	3	8	Keep in touch with each members
Wrong Direction of Project	20	2	10	Discuss with supervisor
Data Lost	20 Copyrigh	$2 { m ot} \ { m constant} \ $	10 ide	Regularity save the files

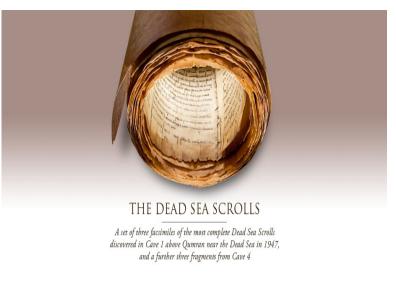

## **Project Budget**

- Budget: \$250 per student
- Allocated Total Budget: \$750
  - Printing and Binding: \$100
  - E-resource Purchase: \$150
  - Software Purchase: \$150
  - Prepare Exhibition: \$200
  - Others: \$100
- Expected Total Expenses: \$700

## Deliverable

- Academic document
- Software package
- Suggestions for further research
